

1 · PROBLEM · A TYPICAL SCAM SCRIPT (ROLE-PLAY)

“THIS IS THE CBI.”

“YOUR AADHAAR IS LINKED TO A CRIME.”

“DO NOT HANG UP.”

“DO NOT TELL YOUR FAMILY.”

2 · CURRENT STATE · TODAY'S WORKFLOW

NOBODY STEPS IN BEFORE THE MONEY MOVES.

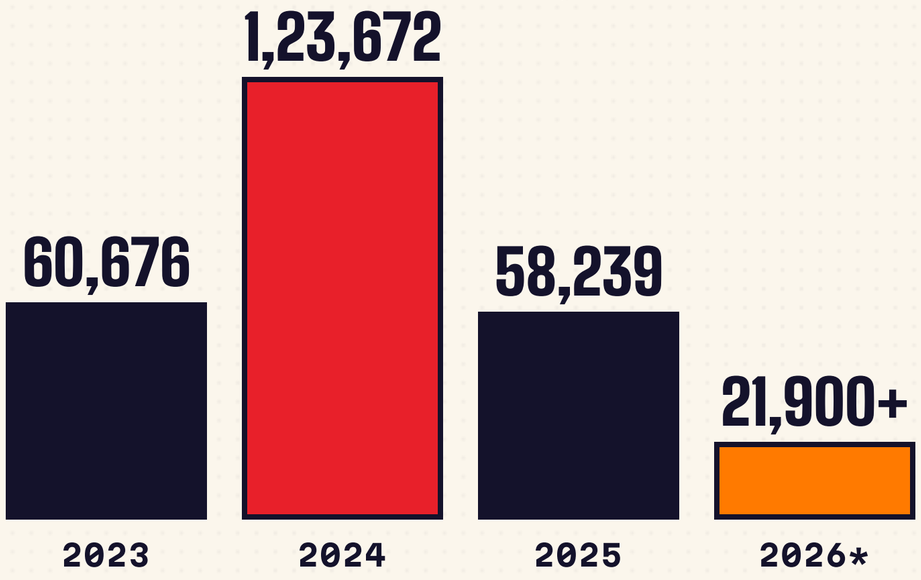

Today: awareness campaigns, and 1930 **after** the loss. Scam warnings only on some new phones.

Workflow from the problem card (P060) and reported cases. 1930: the national cyber-fraud helpline.

◆ 3 · OPPORTUNITY · AND WHY NOW

AWARENESS DENTED IT. AI WILL BRING IT BACK.

DIGITAL-ARREST COMPLAINTS, INDIA

Lost: **₹1,935 cr** (2024) · **₹1,211 cr** (2025) · **₹647 cr** (2026*)

21.8 LAKH

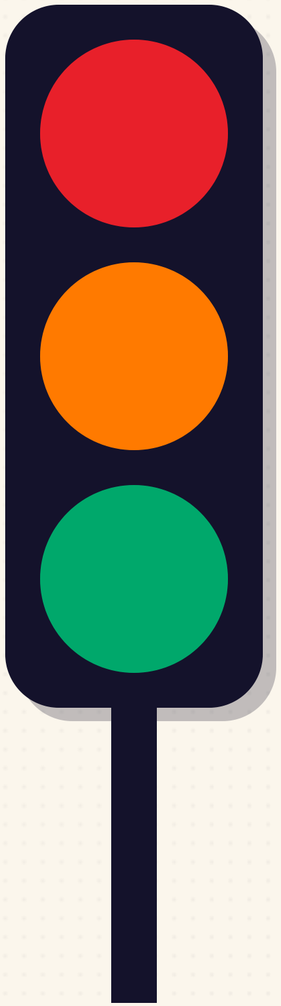

cyber-fraud complaints in 2025, up from 19.2 lakh. About ₹19,800 crore lost.

OUR ASSUMPTION: AI MAKES FAKING ANYONE CHEAP

+1,300% deepfake fraud attempts (2024). **$25M** lost to one deepfake video call, on a laptop.

*2026: January to August. Digital arrest: I4C/MHA status report to the Supreme Court (Free Press Journal, 23 Oct 2026); 2023: I4C via ThePrint. All fraud: I4C/NCRP via The420.in (3 Jan 2026). Pindrop (12 Jun 2025). CNN (Feb 2024).

MENTOR ASKED Is the intervention at the right time? Will a panicking person act right?

THREE LAYERS. BEFORE THE MONEY MOVES.

BEFORE THE CALL

The family decides, calmly, in advance.

Setup, a one-line Rule Card, a family code word.

DURING THE CALL

One big STOP. One action: hang up.

Number risk, the scam check, a silent family alert.

AT THE MONEY

The payment waits for the family.

Cooling-off, trusted-person approval, duress PIN, kill switch.

◆ 5 · AI THINKING · WHERE AI ADDS VALUE

SYNTHETIC TEST SET

AI READS WHAT RULES MISS. CODE KEEPS IT SAFE.

90.9%
replies read right (hybrid)

22/22
unsafe AI outputs blocked

0%
false STOPs on genuine calls

75.8→90.9
% replies read right: rules alone, then with AI

NEXT · FIELD TEST
10 older adults, role-played calls, with and without Ruko. Results pending.

Measured by `npm run eval` on 66 + 45 + 27 synthetic, hand-written examples (23 Oct 2026). Not field results.

6 · ARCHITECTURE · INPUTS → AI → LOGIC → TOOLS → OUTPUTS

AI READS AND WORDS. CODE DECIDES.

1
INPUTS
what comes in

- The person's voice or typing
- A number, a message, a photo
- A payment request

2
AI / MODEL
reads and words

- Classifies unclear replies
- Extracts scam signs
- Confidence score

3
LOGIC
code decides

- Call state machine
- Threat engine: 17 tactics, log-odds
- Guard, zod, confidence ≥ 0.6

4
TOOLS
act and store

- Money Lock, Ruko Guard API
- Family alerts
- Supabase: signal codes only

5
OUTPUTS
what people see

- STOP screen
- Family alert
- Payment paused

AI READS AND WORDS

Classifies unclear replies, extracts scam signs, words calm guidance.

CODE DECIDES

The STOP, the risk score, the payment hold, every safety check.

Privacy: signal codes only. No recordings. Salted hashes. Row-level security. Works offline, rule-only.

7 · IMPACT

SECONDS TO STOP. ANY PHONE.

TIME

A warning before the money moves, not days after. The family knows in seconds.

QUALITY

22/22 unsafe AI outputs blocked. 0% false STOPs. 526 automated checks.

SCALE

Any phone, Hinglish. Banks plug in through the Ruko Guard API.

North star: the share of role-played scam calls where the person stops before paying. **Field test with 10 older adults: next.**

Measured by `npm run eval` on 66 + 45 + 27 synthetic, hand-written examples (23 Oct 2026). Not field results. 526 automated checks in 20 test suites (`npm test`), counted 23 Oct 2026.

8 · BUSINESS MODEL AND CLOSE

BANKS AND PAYMENT APPS

Pay for the Ruko Guard API per protected account. Fits the RBI's draft rules.

FAMILIES

Core free. A paid family plan, bought by adult children.

PARTNERS, LATER

Telcos and insurers.

HYPOTHESES TO TEST: A BANK PILOT CONVERSATION · A FAMILY WILLINGNESS-TO-PAY SURVEY

EITHER WAY, THE MONEY DIDN'T MOVE.

Ruko doesn’t try to win the argument with a scammer. It protects the moment that matters.
